

Ideation Phase

Brainstorming Template

Team ID : Team-591879

Project Title: Diabetes Prediction Using ML
NAME: Saketh Ram Bommaraju

Problem Statement:

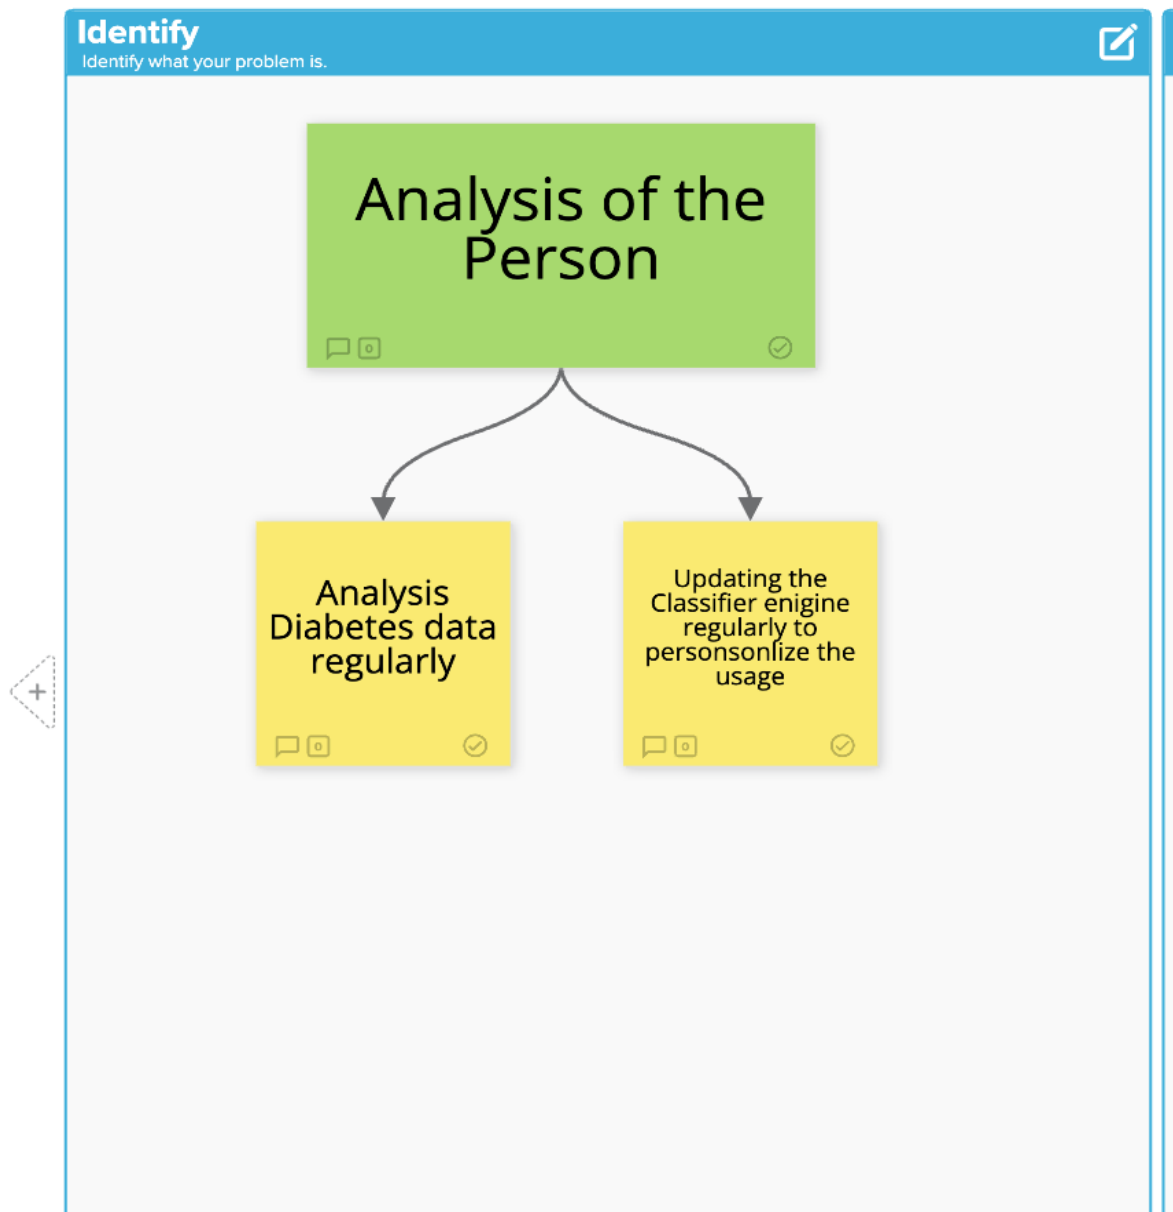

Our goal is to develop a predictive model that can accurately identify individuals who are at high risk of developing diabetes thereby allowing for early intervention and prevention of the disease. By using machine learning techniques to analyze large amounts of data, we can identify patterns and make accurate predictions that could potentially save lives.

Brainstorming:

The brainstorming session has been done using a software known as Stormboard which is available for use for free.

The ideation phase has been in this way:

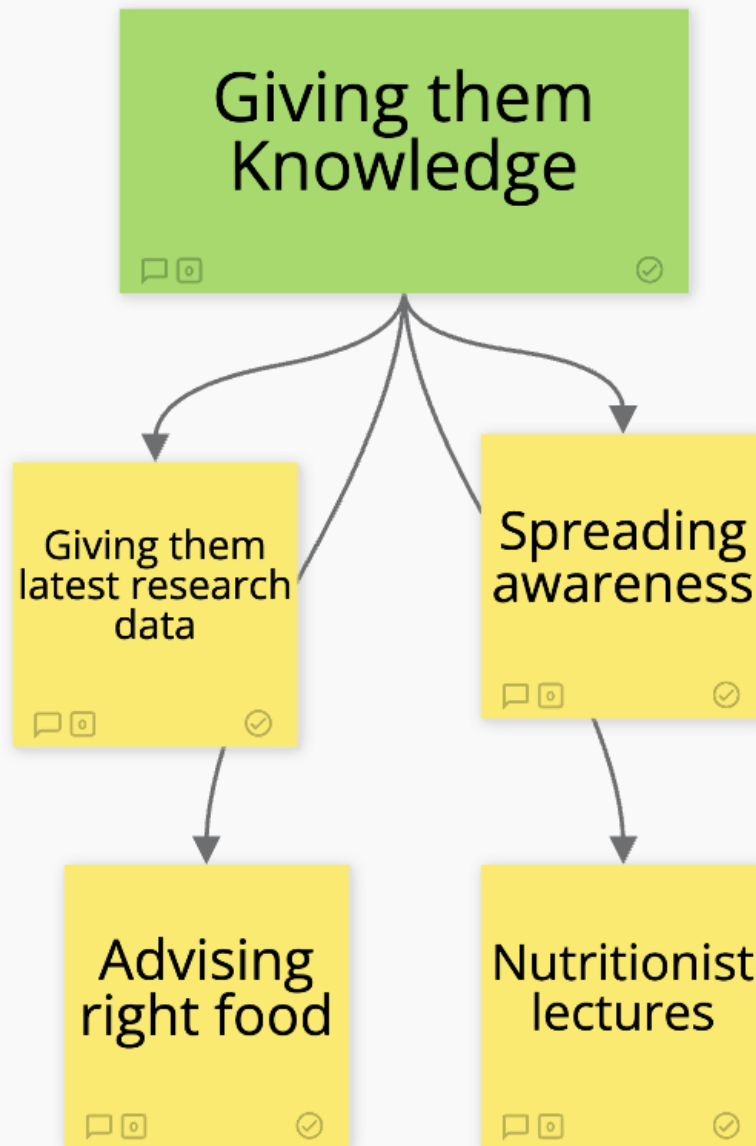

Diabetes

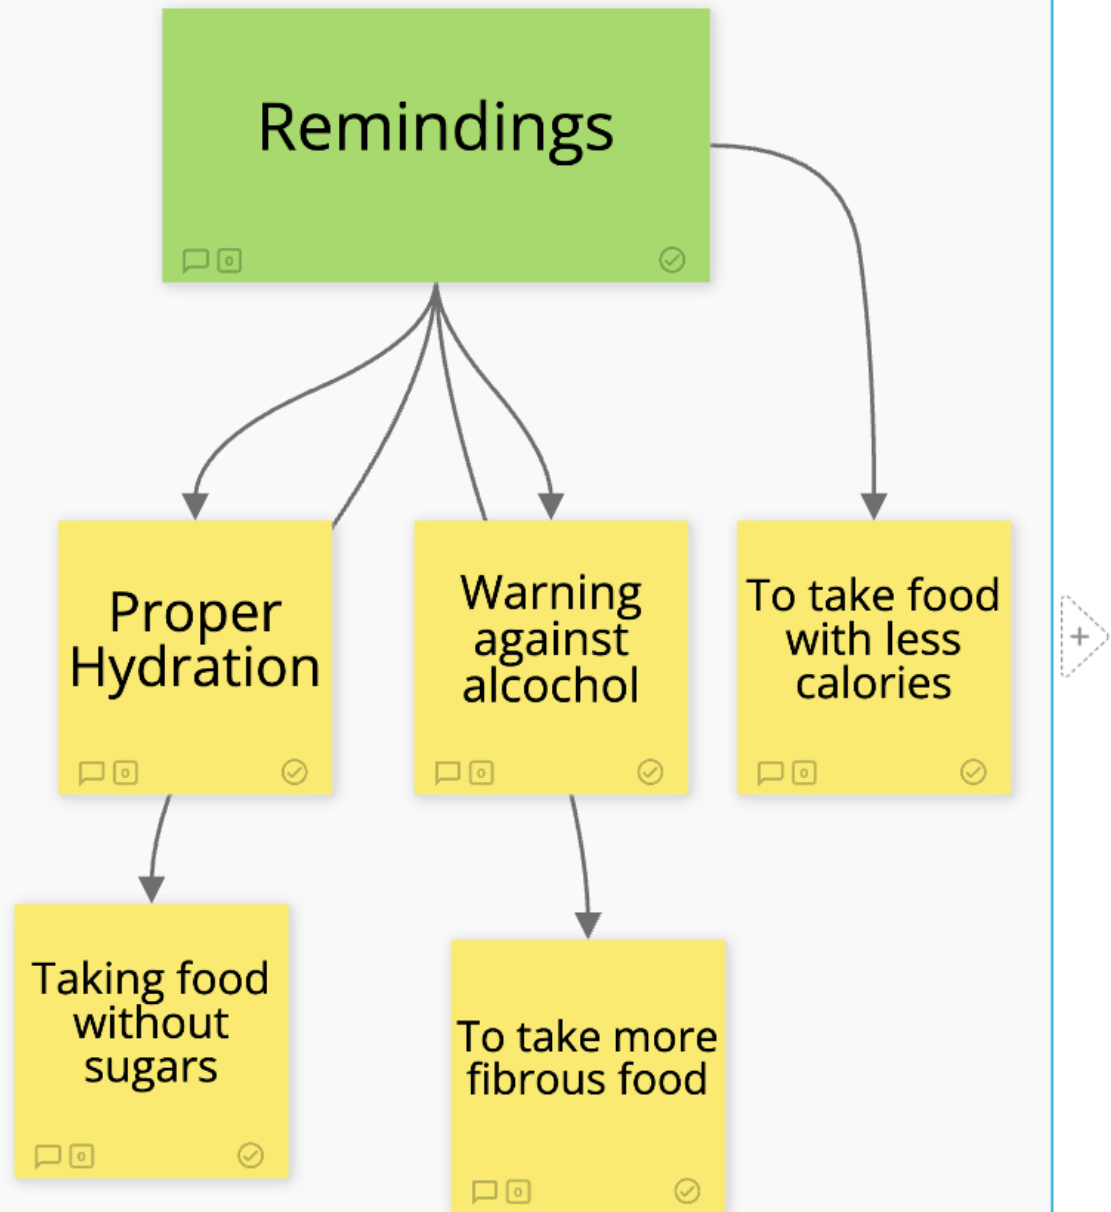

Analysis

Find the best tools and methods available to work towards a solution.

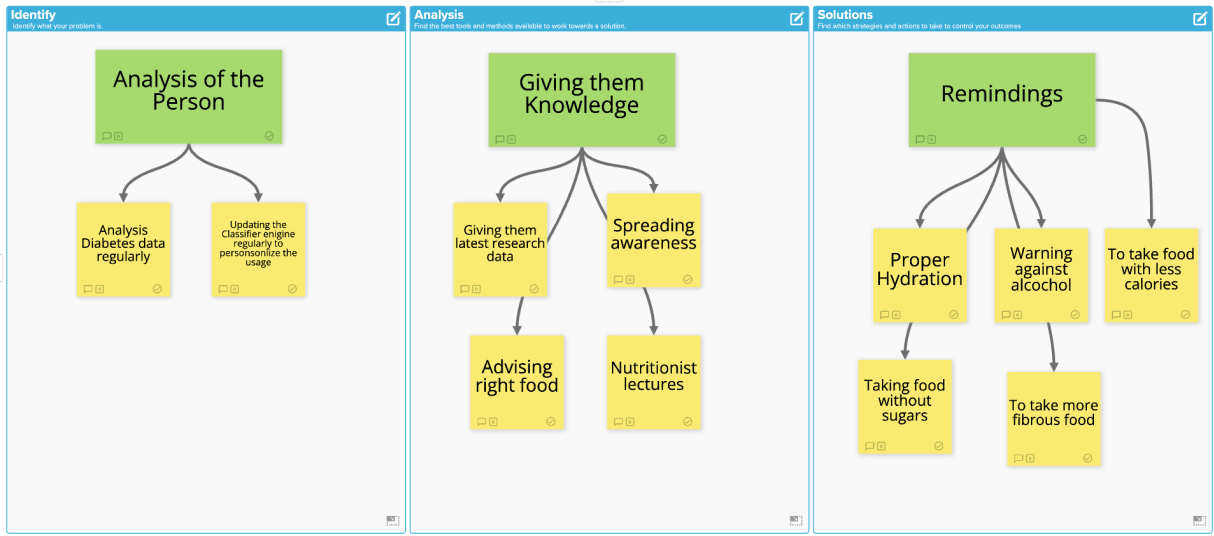

Solutions

Find which strategies and actions to take to control your outcomes

Diabetes

3) Final Idea of the group

Creating a solution to reduce the risk of diabetes by controlling the lifestyle choices and medical history using machine learning algorithms
